### Honing & Polishing

## ABR 600

**Multi-purpose, abrasive cream for natural stone, agglomerates, ceramics, and porcelain tiles.**

**ABR 600** is a creamy fluid containing special fillers that, thanks to a micro-abrasive polishing action, can be used on different types of material for different results, based on the surface where they are applied.

When used on **polished or buffed natural stone**, **ABR 600** effectively replaces the intermediate grain sizes for mechanical polishing (diamond resin pads, grain size 400-800).

When used on **brushed natural stone**, **ABR 600** replaces the mechanical brushing technique, removing scratches and blemishes, and cleaning the surface deep down.

When used on **ceramic flooring or on porcelain or textured stoneware**, **ABR 600** can recover scratches or scuffs and boost the dirt-resistant performance of the surface without significantly changing its original shine. **ABR 600** can also be used with success to soften the excessively rough surfaces of textured material, meaning that the amount of dirt trapped on the flooring is reduced.

If used on all surfaces that have been polished but are without shine, **ABR 600** can create a so-called "honed" look: a matt polished finish that is soft, even, and completely free from the characteristic scratches left by a mechanical polishing process.

#### BENEFITS

- ✓ Versatile solution
- ✓ Soft touch finish
- ✓ Water based product
- ✓ Even results

#### USES

This product can be used on both indoor and outdoor surfaces. This product is suitable for use on marble, granite, travertine, limestone, glazed ceramics, natural porcelain tiles, polished porcelain tiles, textured porcelain tiles, marble-concrete agglomerate, marble-resin agglomerate, and quartz-resin agglomerate.

#### COVERAGE

30/40 m<sup>2</sup>/kg

#### APPLICATION EQUIPMENT

Single disc machine with at least 1.5 HP; manual rotary brush.

Faber Chimica is able to supply the WARRIOR single disc machine, which has a power of 2.2 HP, and is optimised for the correct application of any product.

#### APPLICATION STEPS

##### Surface preparation

- Carefully clean the surface, making sure to remove any dust or dirt present.
- We recommend proceeding to apply the product in stages, covering surfaces approximately 2m<sup>2</sup> at a time.
- Never apply **ABR 600** to wet surfaces. **ABR 600** can be used on slightly damp surfaces; therefore, please ensure that the surface to be treated is as dry as possible.
- Apply **ABR 600** to surfaces with a temperature of between +5 and +40°C
- Any adjacent surfaces not being treated with the product must be protected.

## PROFESSIONAL LINE

### APPLICATION STEPS

#### Application

Before applying the product is necessary to take a preliminary test on an unexposed area or unused piece of material to check the product's suitability.

- Shake the bottle well before used and pour 2/3 spoons of product onto the surface to be treated. This amount is sufficient to treat a surface area of about 2 m<sup>2</sup>.
- Add a small amount of water to the cream. As a rough guide, each spoonful of product requires around 1 spoon of water.
- As soon as the water has been added to the cream, proceed to apply it to the surface using the single disc machine, fitted with white pad and set to between 150 and 200 r.p.m. Continue with the single disc machine, taking care to cover the whole surface area evenly with the cream. Try to pass over each section of floor the same number of times.
- During the application process, the mix must maintain its creamy consistency and therefore, if it should become too dry, gradually add a little water.
- Continue to pass over the surface with the polisher until the result is as required. This is easy to check during application by removing a small area of product using a squeegee mop or similar, and checking the surface finish.
- Once the required result has been achieved, vacuum or remove any residues from the surface and rinse with plenty of clean water.

Generally, **ABR 600** will achieve the desired result within 15-25 passages of the polisher, independently of the type of surface.

#### Resuming the surface use

After carefully removing any residues and rinsing the surface with water, the floor can be opened for use.

### MAINTENANCE PRODUCTS

- For the daily maintenance of a surface treated with **ABR 600**, we recommend: **NEUGEL** or **ALGAFLOOR**
- For heavy-duty cleaning of a surface treated with **ABR 600**, we recommend **FABER 30** or **DETERFUG**, according to the type of dirt and the material to be cleaned.

### INSTRUCTIONS AND GUIDELINES

- Do not allow the product to dry during the application process. Frequently check consistency and add water as needed to return the product to its fluid/creamy state.
- Never apply the product to a wet surface
- Do not apply the product to overly heated surfaces
- Do not use the product on buffed material, unless specifically required.
- Apply the product to surfaces with a temperature of between +5 and +40°C
- When applying to recently laid or grouted surfaces, wait for the adhesive or grout to cure completely.
- Before applying the product to the whole surface, it is advisable to test a small, unexposed area or unused piece to check its suitability for use.

### EQUIPMENT CLEANING

At the end of application, the equipment used can be washed using water.
